PULSE HYDRAULICS

FREE Hose Inspection Service Here at Pulse, we aim to minimise downtime by offering a free hose inspection service.

We will attend your site at a convenient time for you, inspect your vehicle, plant or machine and provide a detailed report of any issues found.

The report will contain important information, such as - leaks found, condition of hoses or fittings and suggestions to prevent future breakdowns.

This service is offered FREE of charge, should you choose to carry out the remedial works offered in the report. Otherwise, we charge a nominal fee of £20.00 (inc VAT).

An estimate of 'time required' and 'cost to fix' will be entered into the report. This service is offered to all customers, all year round and can be scheduled if required on a monthly/quarterly or annual basis.

By providing this service at a convenient time to you, it will minimise disruption, help to prevent unexpected breakdowns and most important of all reduce the costs incurred should a breakdown situation occur.

Call us today and find out more Pulse Hydraulics

'Let us handle your pressure'

The inspection consists of a visual check and is in no way a guarantee of hose service life or condition. It simply offers a report of potential problems found, suggested repair options and anticipated service life. Pulse Hydraulics will accept no responsibility for failures occurring after the inspection.
